DRUG TOXICITY DEATHS
Saskatchewan, 2010 to 2020
(Confirmed Drug Toxicity Deaths Updated – October 26, 2020)
(Suspected Drug Toxicity Deaths Updated – October 26, 2020)

The data in the following tables include all death investigations concluded by the Saskatchewan Coroners Service (SCS) **between January 1, 2010 and October 26, 2020** where the cause of death was due to a **Drug Toxicity (Single or Combined Drug Toxicity)**. The statistics shown are subject to change as new investigations are undertaken and/or on-going investigations are concluded.

For the following tables please note:

- ‘Undetermined’ indicates that after completing an investigation, there is equal evidence, or a significant contest between one or more classifications.
- The statistics for 2019 and 2020 are preliminary given that not all death investigations for these years have been concluded.
- There are 4 deaths waiting to go to inquest (one in 2017 and three in 2018) where the underlying cause of death is likely to be from a drug toxicity (single or combined). However, these numbers will not be reflected in the tables until the inquest has been held and the jury makes their findings.
- All statistics in these tables have been confirmed drug toxicity deaths with the exception of the table “Suspected Drug Toxicity Deaths, January 1 to August 6, 2020”. At the time of this printing, the statistics in this particular table are preliminary data and may change once the cases have been concluded.

Confirmed Drug Toxicity Deaths by Manner of Death, 2010 – 2020											
	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020

Suicide	21	24	17	21	13	23	13	16	27	19	7
Homicide	--	--	--	--	--	--	--	--	--	--	--
Undetermined	5	6	9	5	5	7	4	8	6	3	1
Total	78	86	86	88	85	121	109	119	171	169	122

Suspected Drug Toxicity Deaths, January 1 to August 31, 2020

Total	174*
-------	------

***At the time of this printing, this is preliminary data and these numbers are SUSPECTED drug deaths.**

These numbers may change once the cases have been concluded.

***To provide an aggregate number for 2020, please add the Suspected Drug Toxicity Deaths to the 2020 Confirmed Drug Toxicity Deaths shown above.**

* Illicit Drugs Containing W-18 – As part of a 2015 investigation into the combined drug toxicity death of a male, age 25, there were tablets found at the scene which were analyzed and found to contain fentanyl and W-18. Given the limitations of toxicology testing, it is not possible to quantify W-18 beneath a certain level within a person’s blood. The Saskatchewan Coroners Service was unable to determine whether W-18 contributed to this individual’s death. Also, based on the circumstances of the death, it could not be confirmed whether the deceased ingested any of the tablets that contained the fentanyl and W-18. The individual’s cause of death was combined drug toxicity involving a number of drugs including fentanyl and morphine which are reflected in the statistics contained in the tables of this report.
