

8.1 Release Notes

IRIS Version 8.1

Release Date: June 2, 2021

8.1 Release Notes Publication Date	Notes and Changes Made
June 2, 2021	Initial Release

About

IRIS Version 8.1 Release implemented 27 items. A Disclosure Question D34a has been added for well licence applicants. An enhancement was made to the Non-Compliance Inspection and Inspection Item Updated Notification subject line. As well, various enhancements and fixes to known defects have been implemented to the Infrastructure, Petroleum Tenure and Invoice Modules.

In addition, the Associated Gas Royalty Moratorium (AGRM) initiative was implemented. The AGRM initiative will set the IRIS Billing system's Crown royalty and freehold production tax (royalty/tax) rates to zero percent, for 5 years beginning with the billing of the April 2021 production month, on gas production which is deemed to be a secondary product. Additionally, the new AGRM functionality will include all of the necessary changes to IRIS that are required to fulfill the Ministry's business needs and obligations.

The AGRM was announced as part of the 2021-22 Provincial Budget. For more information please visit the Crown Royalty and Freehold Production Tax Programs and Payments [webpage](#).

What's changed?

The highlights of what's changed in IRIS as a result of this release are noted below.

Note: Whether a user has access to the functionality or enhancements outlined in these 8.1 *Release Notes* depends on the individual's security access and assigned permissions sets.

Infrastructure Functionality

- With the introduction of *Disclosure Question D34a*, applicants will now be prompted to provide the Well Licence or Well Licence Application Number which qualifies their proposed well for a logging waiver.
- Corrections have been applied to the context-sensitive '*Related Actions*' links found on Pipeline/Flowline Segment screens based on segment status.
- An enhancement has been implemented for the Non-Routine Flaring and Venting Reporting. Users will be allowed to select *Facility Licence*, *Facility ID* or *Other* for Source field.

Security Module

- As Internet Explorer 11 is no longer being supported, it will be removed from the recommended list of browsers and managed on a best efforts basis.
- Due to a recent increase in file downloads from IRIS, there will be a limit on the number of files that will be allowed to be downloaded during specific time frames. This should not hinder the normal usage of IRIS by the majority of users.

Security and Permission Sets

The following changes were made to the following IRIS's permission set.

***Note:** If a user is already assigned to the below permission set, they will automatically receive access to the new function.
