

2020 Hunter Harvest Survey Results

The Ministry of Environment would like to extend a thank you to all the hunters who participated in the 2020 Hunter Harvest Survey. The information you provide is an important part of wildlife management in Saskatchewan and each survey contributes to a better understanding of how game populations are responding to management strategies. The more surveys completed, the more certain we can be of outcomes in each management zone. Please complete your Hunter Harvest Surveys even if you were unable to hunt or did not harvest an animal.

The 2020 Hunter Harvest Survey was the first year of the survey being mandatory. Close to 60,700 surveys were completed in 2020, an increase of almost 36,200 from 2019. While response rates varied depending on species and licence type, the average for all licence types in 2020 was 52 per cent. The ministry encourages all hunters to ensure their Hunting, Angling and Trapping Licence (HAL) system profile contains a current email address so that reminder messages can be successfully delivered. After completing your surveys, reminder messages are suspended.

Below are the results of the 2020 Hunter Harvest Survey, separated by licence type. The ministry estimates harvest for all hunters based on the survey responses we receive. The potential range of estimated harvest values is indicated in the tables by the lower and upper bounds. This range of uncertainty increases when there is a lower response rate. The more survey responses we receive, the more confident we can be in our harvest estimates. Note that estimated total harvest accounts for the proportion of respondents who indicated they purchased a licence, but did not hunt. Also, estimated harvest totals for big game may not equal the sum of males, females and young due to rounding.

For more information about the annual Hunter Harvest Survey, please contact the Ministry of Environment by email at centre.inquiry@gov.sk.ca, or by calling toll free at 1-800-567-4224.

*Note that some zones allow the hunter to purchase a second antlerless mule deer licence. The Hunter Harvest Survey was restricted to the first antlerless mule deer licence, but reporting included all mule deer harvested on both licences. Therefore, harvest success can be greater than 100 per cent, if hunters harvested more than one animal in that zone. Additionally, lower and upper bound of estimated harvest are not included due to the unique assumptions required to calculate it for this particular scenario.
