

## 8.5 Release Notes

---

### IRIS Version 8.5

Release Date: February 2, 2022

8.5 Release Notes Publication Date	Notes and Changes Made
February 2, 2022	Initial Release

### About

IRIS Version 8.5 Release implemented 27 items. New functionality has been added relating to authorized changes. A new details tab has been added at the *Licence* level. Defects relating to *Lease Continuance Schedule* and Freehold lands validation have been resolved. A new security report has been added to the *Security Reports* tab. As well, various enhancements and fixes to known defects were implemented to the Infrastructure, Petroleum Tenure and Security Modules.

### What's changed?

The highlights of what's changed in IRIS as a result of this release are noted below.

**Note:** Whether a user has access to the functionality or enhancements outlined in these 8.5 Release Notes depends on the individual's security access and assigned permissions sets.

### Infrastructure Functionality

- Reporting to an authorized change will not be allowed if the *Authorized To Date* has passed or Authorization has been Revoked. The option to report if an authorized change has expired will no longer be displayed on the *Well Completion > Authorized Changes* tab or *Immediate Reporting* screen.
- The details of the existing *Segment Pending Submissions* tab will be compiled and displayed in a new tab at the *Licence* level.

### Petroleum Tenure Module

- The *Lease Continuance Schedule* which displays all *Preliminary and Final Lease Continuance* runs for the year was not displaying. This defect has been addressed and viewing of the schedule has been restored. Users can go to *Reports > Tenure Disposition > Lease Continuance > Preliminary and Final Schedule* where they are then presented with a listing of all scheduled continuance runs.

- As part of the MOSR3 project, implemented in March 2021, a validation to prompt users to remove any Freehold lands from their disposition applications was one key feature. The validation of Freehold lands was erroneously removed during a subsequent release. With 8.5, the validation has been reinstated advising users which piece of land is Freehold and must be removed before their application can be submitted.

## **Security Module**

- A Security Report has been developed to further assist SAs to manage user access. The *Permission Sets with Permission Descriptions* report provides a list of all Permissions with Descriptions for each Permission Set for a given Business Associate.

**Security and Permission Sets**

The following changes were made to the following IRIS's permission sets.

**\*Note:** If a user is already assigned to the below permission set, they will automatically receive access to the new function.

**Industry**
