INTRODUCTION AND OVERVIEW

Introduction

The Saskatchewan Provincial Economic Accounts (SPEA) provide principal estimates of aggregate economic activity in Saskatchewan. The main source of data is the Provincial and Territorial Economic Accounts (PTEA) produced by Statistics Canada. Revised editions of the SPEA are produced following the availability of substantial new data.

Revisions in the March 2022 Edition

The March 2022 edition of the SPEA incorporates Statistics Canada's revisions to the PTEA for 2018, 2019 and estimates for 2020. Estimates of provincial-territorial gross domestic product by industry from 2018 to 2020 were also revised. Both incorporate the new 2018 benchmark provincial and territorial supply and use tables, as well as revisions to the national income and expenditure accounts.

In addition to the expanded coverage and data revisions, the print-friendly PDF version of the SPEA contains a review of 2020 economic activity, basic concepts of the economic accounts, data tables and a glossary of terms. The PDF version is augmented with an Excel spreadsheet version for ease of data table accessibility. Both versions are available at:

<http://www.saskatchewan.ca/government/government-data/bureau-of-statistics/economic-reports-and-statistics>

Overview and Highlights of 2020

Current Dollar (Nominal) GDP

According to Statistics Canada, mandatory shutdowns and supply chain disruptions in 2020 affected the movement of goods and people significantly, resulting in a negative impact on the economy. Saskatchewan's nominal GDP decreased by 6.6 per cent (\$5.5 billion), following a slight decline of 0.4 per cent (\$0.3 billion) in 2019.

The decline was largely driven by lower business investments in non-residential structures (-24.4%), intellectual property products (-18.1%), and exports (-10.5%), which were impacted by international supply chain disruptions.

The decline in nominal GDP was partially offset by higher general government investments (+9.0%) in addition to greater housing investment (+5.9%) compared to 2019 (-11.6%) as a result of working from home and less spending on travel and services which recorded a decline of 8.4 per cent in 2020.

Source: Statistics Canada and Saskatchewan Bureau of Statistics

Chained 2012 Dollar (Real) GDP

Saskatchewan's economy contracted two years in a row, beginning in 2019. The Saskatchewan real GDP declined by 4.9 per cent (\$4.2 billion) in 2020, following a slight decline of 1.1 per cent (\$1.0 billion) in 2019.

Several factors contributed to the decline including lower business investments in non-residential structures (-24.2%), intellectual property products (-19.6%) and household spending which decreased by 5.4 per cent. Travel restrictions and other measures implemented to prevent a COVID-19 spread slowed exports of goods and services which fell by 2.7 per cent in 2020. Imports of goods and services also declined, falling by 9.0 per cent.

The decline in real GDP was partially offset by higher general government investments (+9.7%) and greater housing investment (+3.8%) compared to 2019 (-11.7%).

Household Accounts

Primary household income decreased by 0.8 per cent (\$0.4 billion) in 2020. Primary household income includes compensation of employees, net mixed income (generated from unincorporated businesses) and net property income (generated as the result of ownership of assets).

In 2020, Saskatchewan compensation of employees declined by 2.9 per cent (\$0.9 billion), net mixed income increased by 6.7 per cent (\$0.5 billion) and net property income of households increased by 1.8 per cent (\$0.1 billion).

The introduction of various COVID-19 support measures led to an unprecedented increase in current transfers (+31.2%) to compensate for income losses during the pandemic restrictions. After accounting for net transfers, household disposable income increased by 8.8 per cent (\$3.5 billion) in 2020.

Basic Concepts of the Economic Accounts

Economic Accounting Standards

Economic accounts are a set of statistical statements that provide aggregate perspectives and estimates of productive economic activity. They translate statistics and information related to economic activity such as income, expenditure and production into a consistent framework based on internationally accepted economic concepts and principles.

The international standard for economic accounting is called the System of National Accounts (SNA). It was developed by the United Nations in 1947 and has gone through periodic revisions to accommodate changes in the world's economic environment and statistical methods. The current version is the System of National Accounts 2008 (SNA 2008). It is developed, produced and released jointly under the aegis of the Inter-Secretariat Working Group on National Accounts (ISWGNA), which involves five organizations: the United Nations Statistics Division and regional commissions of the United Nations, the Statistical Office of the European Communities (Eurostat), the Organization for Economic Cooperation and Development (OECD), the International Monetary Fund (IMF) and the World Bank. The 2008 SNA is an update of the 1993 SNA and the fifth version.

Canadian System of National Accounts

The Canadian System of National Accounts (CSNA) reflects the international standards embodied in the SNA, and is developed, maintained and disseminated by Statistics Canada. It undergoes regular revisions to incorporate new information as well as periodic changes in international standards. Statistics Canada started releasing revisions to the CSNA in October 2012 (CSNA2012) that incorporated changes resulting from the adoption of the SNA2008 framework. The comprehensive revision of provincial economic accounts released in late 2015 is a continuation of this process.

Saskatchewan Provincial Economic Accounts

Like the SNA and CSNA, the Saskatchewan Provincial Economic Accounts (SPEA) is a set of statistical statements that provide aggregated perspectives of productive economic activity that reflect international standards. But the SPEA's focus is only on Saskatchewan. The statements are based on a subset of the CSNA produced by Statistics Canada and provide measures of Gross Domestic Product (GDP), its principal components, and related economic information.

Gross Domestic Product

Gross Domestic Product is the most common measure of aggregate productive economic activity. It is the total amount of productive economic activity occurring within a region during a given period of time and is expressed in currency units.

At the national level, it is measured monthly, quarterly and annually. For Canadian provinces, it is currently measured on an annual, calendar-year basis and is expressed in terms of Canadian dollars.

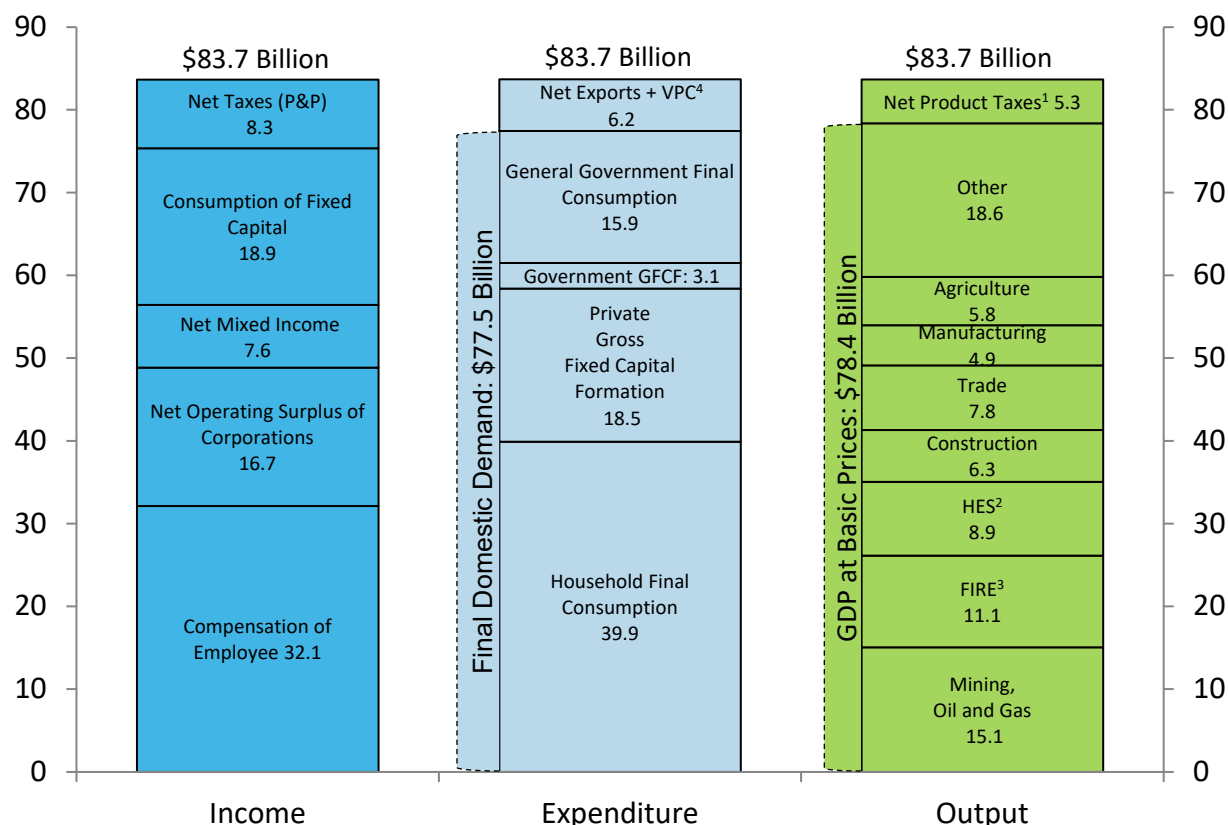

GDP Perspectives

The principal CSNA accounts reflected in the Saskatchewan PEA are the Input-Output (IO), Income and Expenditure Accounts (IEA). Collectively, these accounts provide three approaches to calculating GDP.

- The Income Account or income approach to calculating GDP is the sum of incomes generated in the domestic production process.
- The Expenditure Account or expenditure approach to calculating GDP is the sum of the domestic expenditures on final goods and services.
- The Output (Value Added by Industry) Account is the sum of the value added by each industry in the domestic production process.

While each of these approaches offers a different perspective on GDP, in total value they are conceptually equal.

Nominal and Real GDP

GDP can also be calculated in nominal (current dollar) or real (chained dollar) terms. In concept, nominal GDP is a measure of value and real GDP is a measure of volume. The difference between the two is in the price component of the GDP calculation.

Nominal GDP is the dollar value of economic activity in a given year. As such, it captures the levels of both prices and quantities of goods and services in a given year. Nominal GDP is a useful metric for relative comparisons of value at a point in time or changes in the value of component shares of GDP over time.

Real GDP is expressed in terms of dollars, but the effects of changes in prices over time are removed. As such, real GDP is a statistical aggregate that intends to reveal the volume or quantity of economic activity. Real GDP is a useful metric for changes in the volume or quantity of economic activity over time.

Two aspects of real GDP are noteworthy. First, the components of real GDP are not additive: the sum of real GDP components does not equal total real GDP. This is due to the chain Fisher method used to calculate real GDP. Second, there is no real GDP calculation for the income account. This is because the components of income-based GDP cannot be separated into price and quantity terms.

GLOSSARY

Consumption of fixed capital

The terms depreciation, capital consumption allowance and capital cost allowance are often used in place of consumption of fixed capital but are avoided in the System of national accounts. This is because the term depreciation is often used in commercial accounting in the context of writing off historic costs, whereas in the System of National Accounts consumption of fixed capital is dependent on the current value of the asset. Consumption of fixed capital is calculated for all fixed assets owned by producers, but not for valuables (precious metals, precious stones, etc.) that are acquired precisely because their value, in real terms, is not expected to decline over time. Fixed assets must have been produced as outputs from processes of production as defined in the System of National Accounts. Consumption of fixed capital does not, therefore, cover the depletion or degradation of natural assets such as land, mineral or other deposits, coal, oil, or natural gas, or contracts, leases, and licenses.

Compensation of employees

The total remuneration, in cash or in kind, payable by an enterprise to an employee in return for work done by the latter during the accounting period. Compensation of employees is recorded on an accrual basis; that is, it is measured by the value of the remuneration in cash or in kind that an employee becomes entitled to receive from an employer in respect of work done during the relevant period, whether paid in advance, simultaneously or in arrears of the work itself. In productivity analysis, compensation of employees is equivalent to the cost of labour services.

Exports (interprovincial and international)

Receipts from other provinces or territories, or from abroad, for sales of goods or services. In addition to sales, the barter, granting and giving of goods and services as gifts also constitute exports. Exports are valued at producers' prices and at purchasers' prices. In the Input-Output Accounts, exports include travel expenditure of residents of other provinces or countries.

Final consumption

Goods and services used by individual households or the community to satisfy their individual or collective needs or wants. This differs from intermediate consumption which consists of goods and services used in the course of production within the accounting period.

Final consumption expenditure

The amount of expenditure on consumption goods and services.

Final consumption expenditure of non-profit institutions

Final consumption expenditure of non-profit institutions serving households consists of the expenditure, including expenditure whose value must be estimated indirectly, incurred by resident non-profit institutions serving households on individual consumption goods and possibly on collective consumption services.

Final domestic demand

The sum of households' and non-profits institutions serving households' Final consumption, net government current expenditure on goods and services, government gross fixed capital formation and business gross fixed capital formation.

General government final consumption

General government final consumption expenditure consists of expenditure, including expenditure whose value must be estimated indirectly, incurred by general government on both individual consumption goods and services and collective consumption services.

Government current expenditure on goods and services

All current expenditure on goods and services by the government sector, including compensation of government employees and purchases of non-capital goods and services. This also includes the value of consumption of fixed capital of government fixed assets. In the sector account, net government current expenditure on goods and services is net of inter-government sales.

Gross domestic product (GDP)

The total unduplicated value of the goods and services produced in the economic territory of a country or region during a given period. GDP can be measured three ways: as total incomes earned in current production (income approach), as total final sales of current production (expenditure approach) or as total net values added in current production (value added approach). It can be valued either at basic prices or at market prices.

Gross domestic product at basic prices

Gross domestic product at market prices minus taxes less subsidies on products. Gross domestic product at basic prices is also equal to the traditional value at factor cost plus taxes less subsidies on the factors of production (labour and capital).

Gross domestic product at factor cost

The sum of wages and salaries, supplementary labour income, mixed income and other operating surplus.

Gross domestic product at market prices

Gross domestic product at basic prices plus taxes less subsidies on products.

Gross domestic product by industry

Also referred to as value-added, equals output by the industry minus the value of intermediate inputs that were purchased from other industries, domestic or foreign. Gross domestic product by industry for the economy as a whole is the sum of values added by all industries resident in Canada.

Gross domestic product by industry at basic prices

When evaluated at modified basic prices, an industry's gross domestic product is the sum of its factor incomes (wages and salaries, supplementary labour income, mixed income, and other operating surplus) plus taxes on production less subsidies on production.

Gross domestic product by industry at market prices

An industry's gross domestic product at market prices equals its gross domestic product at basic prices plus taxes on products less subsidies on products.

Gross domestic product, expenditure-based

The sum of expenditure on final consumption plus gross capital formation plus exports less imports.

Gross domestic product, income-based

Compensation of employees plus gross operating surplus plus gross mixed income plus taxes less subsidies on production and imports.

Gross domestic product, output-based

The value of output less intermediate consumption plus any taxes less subsidies on products not already included in the value of output.

Gross fixed capital formation

In a particular category of fixed asset, consists of the value of producers' acquisitions of new and existing products of this type less the value of their disposals of fixed assets of the same type. The costs of ownership transfer are treated as gross fixed capital formation. They are attributed to the purchaser or seller of the asset according to which unit bears the responsibility of meeting the costs.

Gross mixed income

For unincorporated enterprises, it may not be possible to estimate compensation of employees, consumption of fixed capital and a return to capital separately, in which case an estimate of mixed income covering all these items should be made. In practice, all unincorporated enterprises owned by households that are not quasi-corporations are deemed to have mixed income as their balancing item, except owner-occupiers in their capacity as producers of housing services for own final consumption, households leasing dwellings and households employing paid domestic staff. For owner-occupiers and those leasing dwellings, all value-added is operating surplus. For domestic staff all value-added is compensation of employees (unless any taxes or subsidies on production are payable or receivable on the output).

Gross operating surplus

The income of corporations, governments, households and non-profit institutions serving households accruing to the capital factor of production from the production of goods and services.

Household final consumption

Household final consumption expenditure consists of the expenditure, including expenditure whose value must be estimated indirectly, incurred by resident households on individual consumption goods and services, including those sold at prices that are not economically significant and including consumption goods and services acquired abroad.

Imports (interprovincial and international)

Payments for goods and services originating from abroad or from other provinces or territories. The payments may also take the form of barter, gifts or grants. Imports are valued in producers' prices (cost, insurance and freight included) including customs duties at the border of the exporting country or province or territory.

Mixed income

Mixed income is a balancing item in the industry accounts of the Input-Output accounts, representing the return to both self-employed labour and capital of the unincorporated business. Mixed income consists of earnings of proprietors of unincorporated businesses (sole proprietorships and partnerships) such as retailers and consultants, earnings of independent professional practitioners such as lawyers and dentists, net (after expenses) rental income of owners of real property and the accrued net farm income of farm operators.

Net mixed income

Gross mixed income less consumption of fixed capital. It was introduced with the Canadian System of National Accounts 2012 historical revision.

Net operating surplus

Gross operating surplus less consumption of fixed capital.

Net property income

The difference between property income received by a sector and the property income paid by a sector.

Primary income

Incomes that accrue to institutional units as a consequence of their involvement in processes of production or ownership of assets that may be needed for purposes of production. A major item of primary income is compensation of employees that represents the income accruing to individuals in return for their labour input into production processes. Property income is that part of primary income that accrues by lending or renting financial or natural resources, including land, to other units for use in production. Receipts from taxes on production and imports (less subsidies on production and imports) are treated as primary incomes of governments even though not all of them may be recorded as payable out of the value-added of enterprises. Primary incomes do not include the payments of social contributions to social insurance schemes and the receipt of benefits from them, current taxes on income, wealth, etc. and other current transfers.

Property income

Property income accrues when the owners of financial assets and natural resources put them at the disposal of other institutional units. The income payable for the use of financial assets is called investment income while that payable for the use of a natural resource or land is called rent. Property income is the sum of investment income and rent.
