

2021 Hunter Harvest Survey Results

Thank you to all hunters who participated in the 2021 Hunter Harvest Survey. Each survey contributes to a better understanding of how game populations are responding to current management strategies. These surveys are an important part of wildlife management in Saskatchewan. The more surveys that are completed, the more certain we can be of outcomes in each management zone. Please complete your Hunter Harvest Surveys even if you were unable to hunt or did not harvest an animal.

The Hunter Harvest Survey has been mandatory for the past two years. Nearly 79,000 surveys were completed in 2021, a 30 per cent increase over 2020. All hunters should ensure their HAL profile contains their most current email address to receive reminder messages.

The results of the 2021 Hunter Harvest Survey are separated by licence type. Harvest rates are estimated for all hunters, based on the survey responses received. The potential range of estimated harvest values is indicated in the tables by the lower and upper bounds. This range of uncertainty increases when there is a lower survey response rate. The more survey responses we receive, the more confident we can be in our harvest estimates. Please note that the estimated total harvest accounts for the proportion of respondents that indicated they purchased a licence but did not hunt. In addition, estimated harvest totals for big game may not equal the sum of males, females and young due to rounding.

For more information about the annual Hunter Harvest Survey, please contact the Ministry of Environment at Centre.Inquiry@gov.sk.ca or by calling the Inquiry Centre at 1-800-567-4224.

*Note that some zones allow the hunter to purchase a second antlerless mule deer licence. The hunter harvest survey was restricted to the first antlerless mule deer licence, but reporting included all mule deer harvested on both licences. Therefore, harvest success can be greater than 100 per cent, if hunters harvested more than one animal in that zone. Additionally, lower and upper bounds of estimated harvest are not included due to the unique assumptions required to calculate it for this particular scenario.
