

2022 Hunter Harvest Survey Results

Thank you to all hunters who participated in the 2022 Hunter Harvest Survey. These surveys are an important part of wildlife management in Saskatchewan and contribute to a better understanding of how game populations are responding to current management strategies. The more surveys completed, the more certain we can be of outcomes in each management zone. Please complete your Hunter Harvest Surveys even if you were unable to hunt or did not harvest an animal.

The Hunter Harvest Survey has been mandatory for the past three years. More than 68,000 surveys were completed in 2022 for a total response rate of 62 per cent. All hunters should ensure their HAL profile contains their most current email address so that reminder messages are delivered. Reminder messages will stop after surveys are complete.

The results of the 2022 Hunter Harvest Survey are separated by licence type. We estimate harvest for all hunters based on the survey responses we receive. The potential range of estimated harvest values is indicated in the tables by the lower and upper bounds. This range of uncertainty increases when there is a lower response rate. The more survey responses we receive, the more confident we can be in our harvest estimates. The estimated total harvest accounts for the proportion of respondents who indicated they purchased a licence but did not hunt. In addition, estimated harvest totals for big game may not equal the sum of males, females and young due to rounding.

For more information about the annual Hunter Harvest Survey, please contact the Ministry of Environment at centre.inquiry@gov.sk.ca or call the Inquiry Centre at 1-800-567-4224.

2022 Hunter Harvest Survey results for regular licences

Species	Licence type	Wildlife management zones	Licences sold	Completed surveys	Harvest success	Estimated total harvest	Estimated harvest lower bound (95%)	Estimated harvest upper bound (95%)	Estimated adult male harvest	Estimated adult female harvest	Estimated young of the year harvest

*Note that some zones allow the hunter to purchase a second antlerless mule deer licence. The hunter harvest survey was restricted to the first antlerless mule deer licence, but reporting included all mule deer harvested on both licences. Therefore, harvest success can be greater than 100 per cent if hunters harvested more than one animal in that zone. Additionally, lower and upper bound of estimated harvest are not included due to the unique assumptions required to calculate it for this particular scenario.
