### Notes:

- ◆ Most of these procedure are performed by gynaecologists.
- ◆ Cancer surgery data is based on procedures performed in hospital operating rooms. 17% of all hysterectomies performed in operating rooms over this time period were categorized as cancer surgeries. Only cancer surgeries are included in this table. The types of cancer for which this procedure is most commonly done are cervical cancer, cancer of the endometrium (also called cancer of the womb), and cancer of the ovary.
- ◆ 87% of hysterectomies reported here were categorized with a diagnosis-based priority of two or four weeks. The remainder have a diagnosis-based priority of six, twelve or twenty-six weeks. Emergency procedures are excluded. Some further work has to be done to ensure that the cancer categories are being consistently interpreted.
- ◆ Time periods where patients specify that they are unavailable for surgery are subtracted from the wait time.
- ◆ Postponed cases are included, regardless of whether the reason for postponement is patient or system related.
- ◆ The results are based on the Jan 19, 2025 refresh of the Saskatchewan Surgical Patient Registry data mart and are subject to minor changes as data is added or corrected.
