

## Vertical and Horizontal Clearance of Structures on the Provincial Highway System

Version: March, 2021

### **IMPORTANT:**

Vertical clearance at structures often varies due to snow build-up or resurfacing work. The trucker is responsible for ensuring the load being hauled will safely clear structures.

The attached tables are compiled to act as a guide only. Due to construction work in any given year, the clearances outlined in these tables may vary. In addition, structures may be erected and not included until the first quarter of the following year.

Mechanical warning devices are in place at certain locations where the structure has been damaged on several occasions. These devices do not relieve the driver or company, of the responsibility of assuring the load clears the structures involved.

**Possession of an Over-Dimension Permit does not relieve the permit holder from the responsibility of damage to structures, power lines, telephone/telegraph lines or railway crossing equipment.**

If you require additional information, please call SGI, PERMIT OFFICE at:

- Toll free in Saskatchewan 1-800-667-7575
- Outside of Saskatchewan 1-306-775-6969

**NOTICE:** The information contained in these tables refers specifically to structures owned and maintained by the Ministry of Highways and Infrastructure. Every attempt is made to include structures over provincial highways within the limits of larger urban centres. However, where ownership and maintenance of these structures is the responsibility of the city, the information may not necessarily be in this spreadsheet or be up to date. Contact the Engineering Department of the respective city for detailed information.

If you find any errors or omissions in this publication, please notify the Saskatchewan Highway Hotline, Road Information Services, by email at [hotline@gov.sk.ca](mailto:hotline@gov.sk.ca) or fax to 306-798-0111.
